

WHAT'S "TWEETING" IN THE BLUEBIRD CLASS FOR APRIL 2025

APRIL MONTHLY ACTIVITIES

Scientist of the Month – Carl Sagan

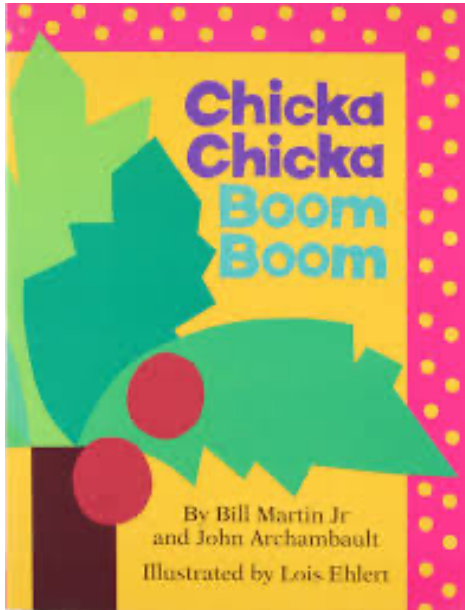

Carl Sagan was born in New York in 1934. When he was four, his parents took him to the 1939 New York World's Fair. This became a turning point in his life and little Sagan developed an early interest in skyscrapers, science, space and the stars. His parents encouraged his growing interest in science by gifting him chemistry sets and books. After graduating from Rahway High School, NJ in 1951, he wrote several books on Space and had a TV series called Cosmos which helped many to become interested in Space. Sagan also contributed insights helping other scientist to understand the atmospheres of Venus and [Jupiter](#), as well as seasonal changes on [Mars](#).

Each week this month we will learn about a different aspect of Space --- the moon, the sun, the stars and the planets. We also will be doing activities celebrating Earth Day, our favorite planet

Letters of the month... U & V

Book we will explore this month

Shapes we will explore

The children will draw and cut out a Pentagon and make a bird house.
